

Key Business Analytics Questions to Explore

- Which products generate the most revenue and profit?
- How do sales vary across regions and seasons?

PRODUCT REVENUE

Which products generate the most revenue and profit?

- The bar chart shows in Figure 1 that Paseo generates the highest revenue, followed by VTT and Velo.
- The table in Figure 1 highlights that profit varies across products, with Paseo also leading in total profit.

Strategic Implications

Paseo's Dominance

- Its strong sales indicate high market demand, making it a key driver of business performance.
- Strategy: Leverage Paseo's brand strength by maintaining supply, expanding distribution, or introducing premium versions.

Mid-Tier Performers (VTT, Velo, Amarilla)

- These products have strong revenue but may require profitability optimization to improve margins.
- Strategy: Evaluate pricing strategies (e.g., bundle deals, targeted promotions) to maximize earnings.

Lower Revenue Products (Montana & Carretera)

- Their lower sales volumes could indicate lower demand, weaker market positioning, or limited marketing efforts.
- Strategy: Analyze sales trends by region/season to determine growth opportunities or repositioning needs.

SALES ACROSS REGIONS AND SEASONS

Regional Sales:

- As illustrated in Figure 2, the highest sales are concentrated in Germany, France, Canada, and the United States.
- Europe and North America appear to be the strongest markets for the business.
- Other regions show lower sales, which may indicate untapped market potential or lower demand.

Seasonal Sales:

- Autumn has the highest sales (\$45.2M), followed by Winter and Summer, with Spring having the lowest sales (\$18.8M).
- There is a clear seasonal pattern, suggesting that demand fluctuates throughout the year.

Regional Growth Opportunities

- Germany, France, Canada, and the U.S. are key revenue drivers, meaning they should remain the focus of marketing and distribution.
- Other markets could be further analyzed to determine if lower sales are due to weak demand, limited distribution, or lack of marketing.
- Strategy: Invest in localized marketing campaigns and optimize supply chain logistics to strengthen presence in key markets.

Seasonal Demand Management

Strategy:

- Offer seasonal discounts or bundle deals in low-demand periods (Spring).
- Boost advertising efforts before peak seasons to maximize sales.
- Adjust inventory levels to prevent overstocking during slow periods.
